FERNO Combi Head Immobiliser (CHI)

Specially designed for optimum fitting on Scoop® stretchers and Spineboards

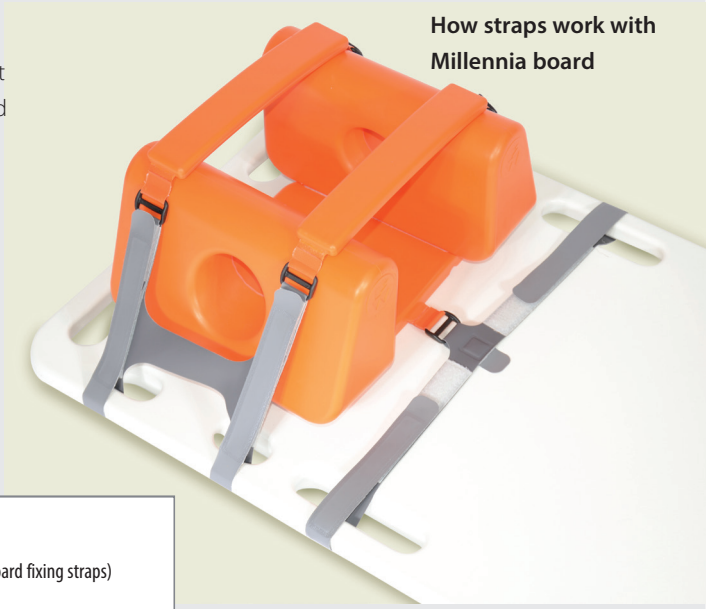

Ferno's classic **Universal Head Immobiliser** design led the way in providing secure immobilisation, preventing further injury to a patient's head and neck. This tried and tested product has been enhanced so it can be used on all versions of Spineboard and Scoop® or breakaway stretcher. The Ferno **Combi Head Immobiliser** has a uniquely designed basepad and strapping system providing optimum fitting in all cases, therefore making it the first choice for all medical professionals.

A further advantage of the Ferno **CHI** is the unique latex-free Polyurethane moulded head-blocks, which are impervious to liquids and also contain anti-bacterial additives. Accidental surface damage will not affect the integrity of the product, which means enhanced durability and many years of effective use.

The **CHI** remains structurally and functionally similar to the original design, which ensures there is little or no staff retraining required.

- **Highly versatile** – compatible with all versions of Scoops and Spineboards, by altering orientation of head-blocks and using a specially designed strapping system
- **Combat infection** – fully infection-control compliant, using anti-microbial Velcro and PU moulded head-blocks that contain anti-bacterial additives throughout
- **Reusable** – accidental surface damage to head blocks does not affect integrity of product, and can still be reused, unlike dipped or disposable head blocks
- **Easy storage** - compact in design, can be stored whilst located on a spineboard or separately in a cupboard
- **Modular design** – allows replacement of individual parts, not the complete product
- **Use in X-ray and MRI scanners** – scans of the patient can be taken with the **CHI** in position
- **Quick to deploy** – easy to apply the **CHI** to a Scoop or Spineboard in minutes

How straps work with Millennia board

Part Nos:	
031271300	Ferno CHI Combi Head Immobiliser
