 **FERNO**®

FERNO PXB Pool Extraction Board

Now lifeguards can perform a significantly faster but controlled shallow or deep-water, deck-level or free-board pool rescue, with reduced injury risk to themselves and improved safety for the casualty – with two-person operation in a deck-level pool and recommended three-person operation in a free-board pool (not exceeding a height of 30 cm).

The PXB is packed full of innovations

The neutral-buoyancy of the board is such that a casualty can be held on the water surface without the need for any floatation devices. The restraint straps are made from durable polypropylene material, incorporating an easy-to-operate fixation system using specially developed anti-bacterial VELCRO®, the headblocks & detachable headblock baseplate also containing anti-bacterial additives for superlative infection control.

Durable edge-stitched Neoprene anti-slip mat is specifically designed for use in water and the rubberised anchor mat ensures safe and effective stabilisation of the board to the pool-side when in operation. The board underside is designed to give a firm anchor against poolside whilst casualty is being brought onto the board and restrained/immobilised, and then dragged out of the pool side using the attached anchor mat.

With many additional benefits

- Fewer lifeguards required
- Easier to rescue casualty from pool
- Provides full C-spine Immobilisation
- Faster compared to other systems
- Simpler and more intuitive to use
- Restraints colour-coded for ease of deployment
- Reduces manual handling risks
- Less training required
- Easier to maintain and keep in an operational condition

Part Numbers

010776700 Ferno PXB board with detachable headblock baseplate, including wall bracket

Accessories and replacement parts

038245650 Replacement headblock baseplate
038245300 Replacement set of 2 headblocks & 1 headstrap
